Branddox

BRANDING DESIGN

Brand Kit

Web-ready assets and usage guidelines for the Branddox Next.js website

1. Logo system

Use the dark-surface logo for hero, footer, and premium sections. Use the mono logo for light backgrounds. Use the symbol where space is limited such as favicon, navbar icon, loader, or social avatar.

Mint accent logo	Inverted logo
Mono logo	Symbol

Minimum web set: one dark-surface logo, one light-surface logo, one monochrome version, and one standalone symbol.

2. Color palette

These web colors are derived from the supplied logo files and optimized for UI usage.

Brand Dark
#262833

Brand Mint
#00ED88

White
#FFFFFF

Light Surface
#F3F4F6

Recommended usage

- Dark surfaces: navigation, footer, hero, premium callout sections
- Mint: CTA buttons, links, highlights, active states, badges
- White and light surfaces: content areas, cards, forms, blog layouts

3. Typography and UI direction

The source image does not include extractable font metadata, so these are recommended web pairings that match the visual tone of the logo.

Use case	Recommendation
Headlines	Sora Bold or Poppins SemiBold
Body copy	Inter Regular / Medium
Buttons / labels	Inter Medium with slightly increased letter spacing
Overall feel	Clean, bold, startup-style branding with generous spacing and strong contrast

UI rules

• Use rounded corners in cards and buttons
• Keep icon strokes visually bold and simple
• Maintain plenty of whitespace around the logo
• Avoid using the mint accent for large paragraph text

4. Next.js asset checklist

The package includes logo files, favicon and app icons, CSS tokens, a manifest, and metadata snippets ready to move into a Next.js public folder.

File	Purpose
favicon.ico	Browser tab icon fallback
favicon-16x16.png / favicon-32x32.png	Modern browser icons
apple-touch-icon.png	iOS home screen icon
android-chrome-192x192.png	Android / PWA icon
android-chrome-512x512.png	High-resolution PWA icon
site.webmanifest	PWA metadata and theme colors
brand-tokens.css / tailwind-brand-snippet.ts	Quick design token setup
metadata-snippet.ts	Drop into Next.js metadata

Recommended public folder structure
/public/brand/logo-primary.png
/public/brand/logo-inverted.png
/public/brand/logo-mono.png
/public/brand/symbol.png
/public/favicon.ico
/public/site.webmanifest
